

# EXTEND THE GROWING SEASON

## GCG COLD FRAME TECHNOLOGY

Harvest vegetables before others are even planting seeds! Designed to fit directly on top of your GCG raised beds, cold frames act as a miniature greenhouse, trapping heat from the sun to maintain an environment that is up to 40 degrees warmer than outside. With Green City Growers' cold frame technology, you can extend the growing season into the late fall and early spring, with the potential to harvest year round in a mild winter.

The base of the cold frame is constructed from Vermont-sourced Northern White Cedar. The aluminum-framed lid houses two pieces of double-walled semi-diffused plastic, which allows enough light into the cold frame for photosynthesis, but will never burn plants on excessively hot days. The heat-sensitive Univent Arm automatically opens the lid up to a maximum of 18" to regulate the bed's temperature, and can be manually detached to allow for full access to the bed.

Cold frames are 4'x4', covering half a standard raised bed.

**Price: \$425 per 4'x4'; \$850 per 4'x8'**

### WHAT YOU CAN GROW

Arugula	Leeks
Beets	Lettuce
Carrots	Mint
Broccoli	Onions
Broccoli Raab	Oregano
Cabbage (Napa)	Parsley
Chard	Pea Shoots
Chives	Radishes
Cilantro	Scallions
Collards	Spinach
Greens	Thyme
Kale	

### PURCHASE YOUR COLD FRAME TODAY!

To ensure that your cold frame is installed before the first frost, pre-order your cold frame. By installing in the fall, you can grow through December, and jumpstart next spring's growing season.
